

# Your Accountability Partner in Cybersecurity Excellence

G-RISE is a unique, practitioner-built framework designed by the CyberAntix team to connect cybersecurity with real-world stakeholder impact, governance, and sustainability.

## A broader perspective on cybersecurity risks

Cybersecurity isn't only a technical, internal issue. It affects customers, partners, communities - and even sustainability outcomes. G-RISE connects cyber risk reporting to corporate sustainability and ESG goals so leaders can make better, long-range decisions and build true resilience.

## What's missing in most reporting

Traditional reports lean heavily on technical indicators and direct financial impact. They often miss the human, societal, and stakeholder dimensions - leading to blind spots and eroded trust.

### Why it matters

Data breaches ripple outward - damaging reputation, finances, and relationships with external stakeholders.

Third-party & supply-chain exposure - vendor and chain vulnerabilities can cascade across your ecosystem.

Digital footprint risks - your public presence can unintentionally expose others; proactive monitoring is essential.

# The G-RISE solution (what you get)

A proprietary CyberAntix framework and operating rhythm that closes the reporting gap:

### Govern & Align

Embed cyber risk into corporate governance and board-level reporting; align with ESG and sustainability objectives.

### Engage & Collaborate

Bring external parties into the loop to strengthen response capabilities and foster shared responsibility.

### Formalise & Explain

Stand up consistent risk-management systems that improve transparency and make risks understandable to non-technical stakeholders.

### Mitigate Proactively

Move beyond incident response to pre-emptive risk reduction - guided by continuous feedback.

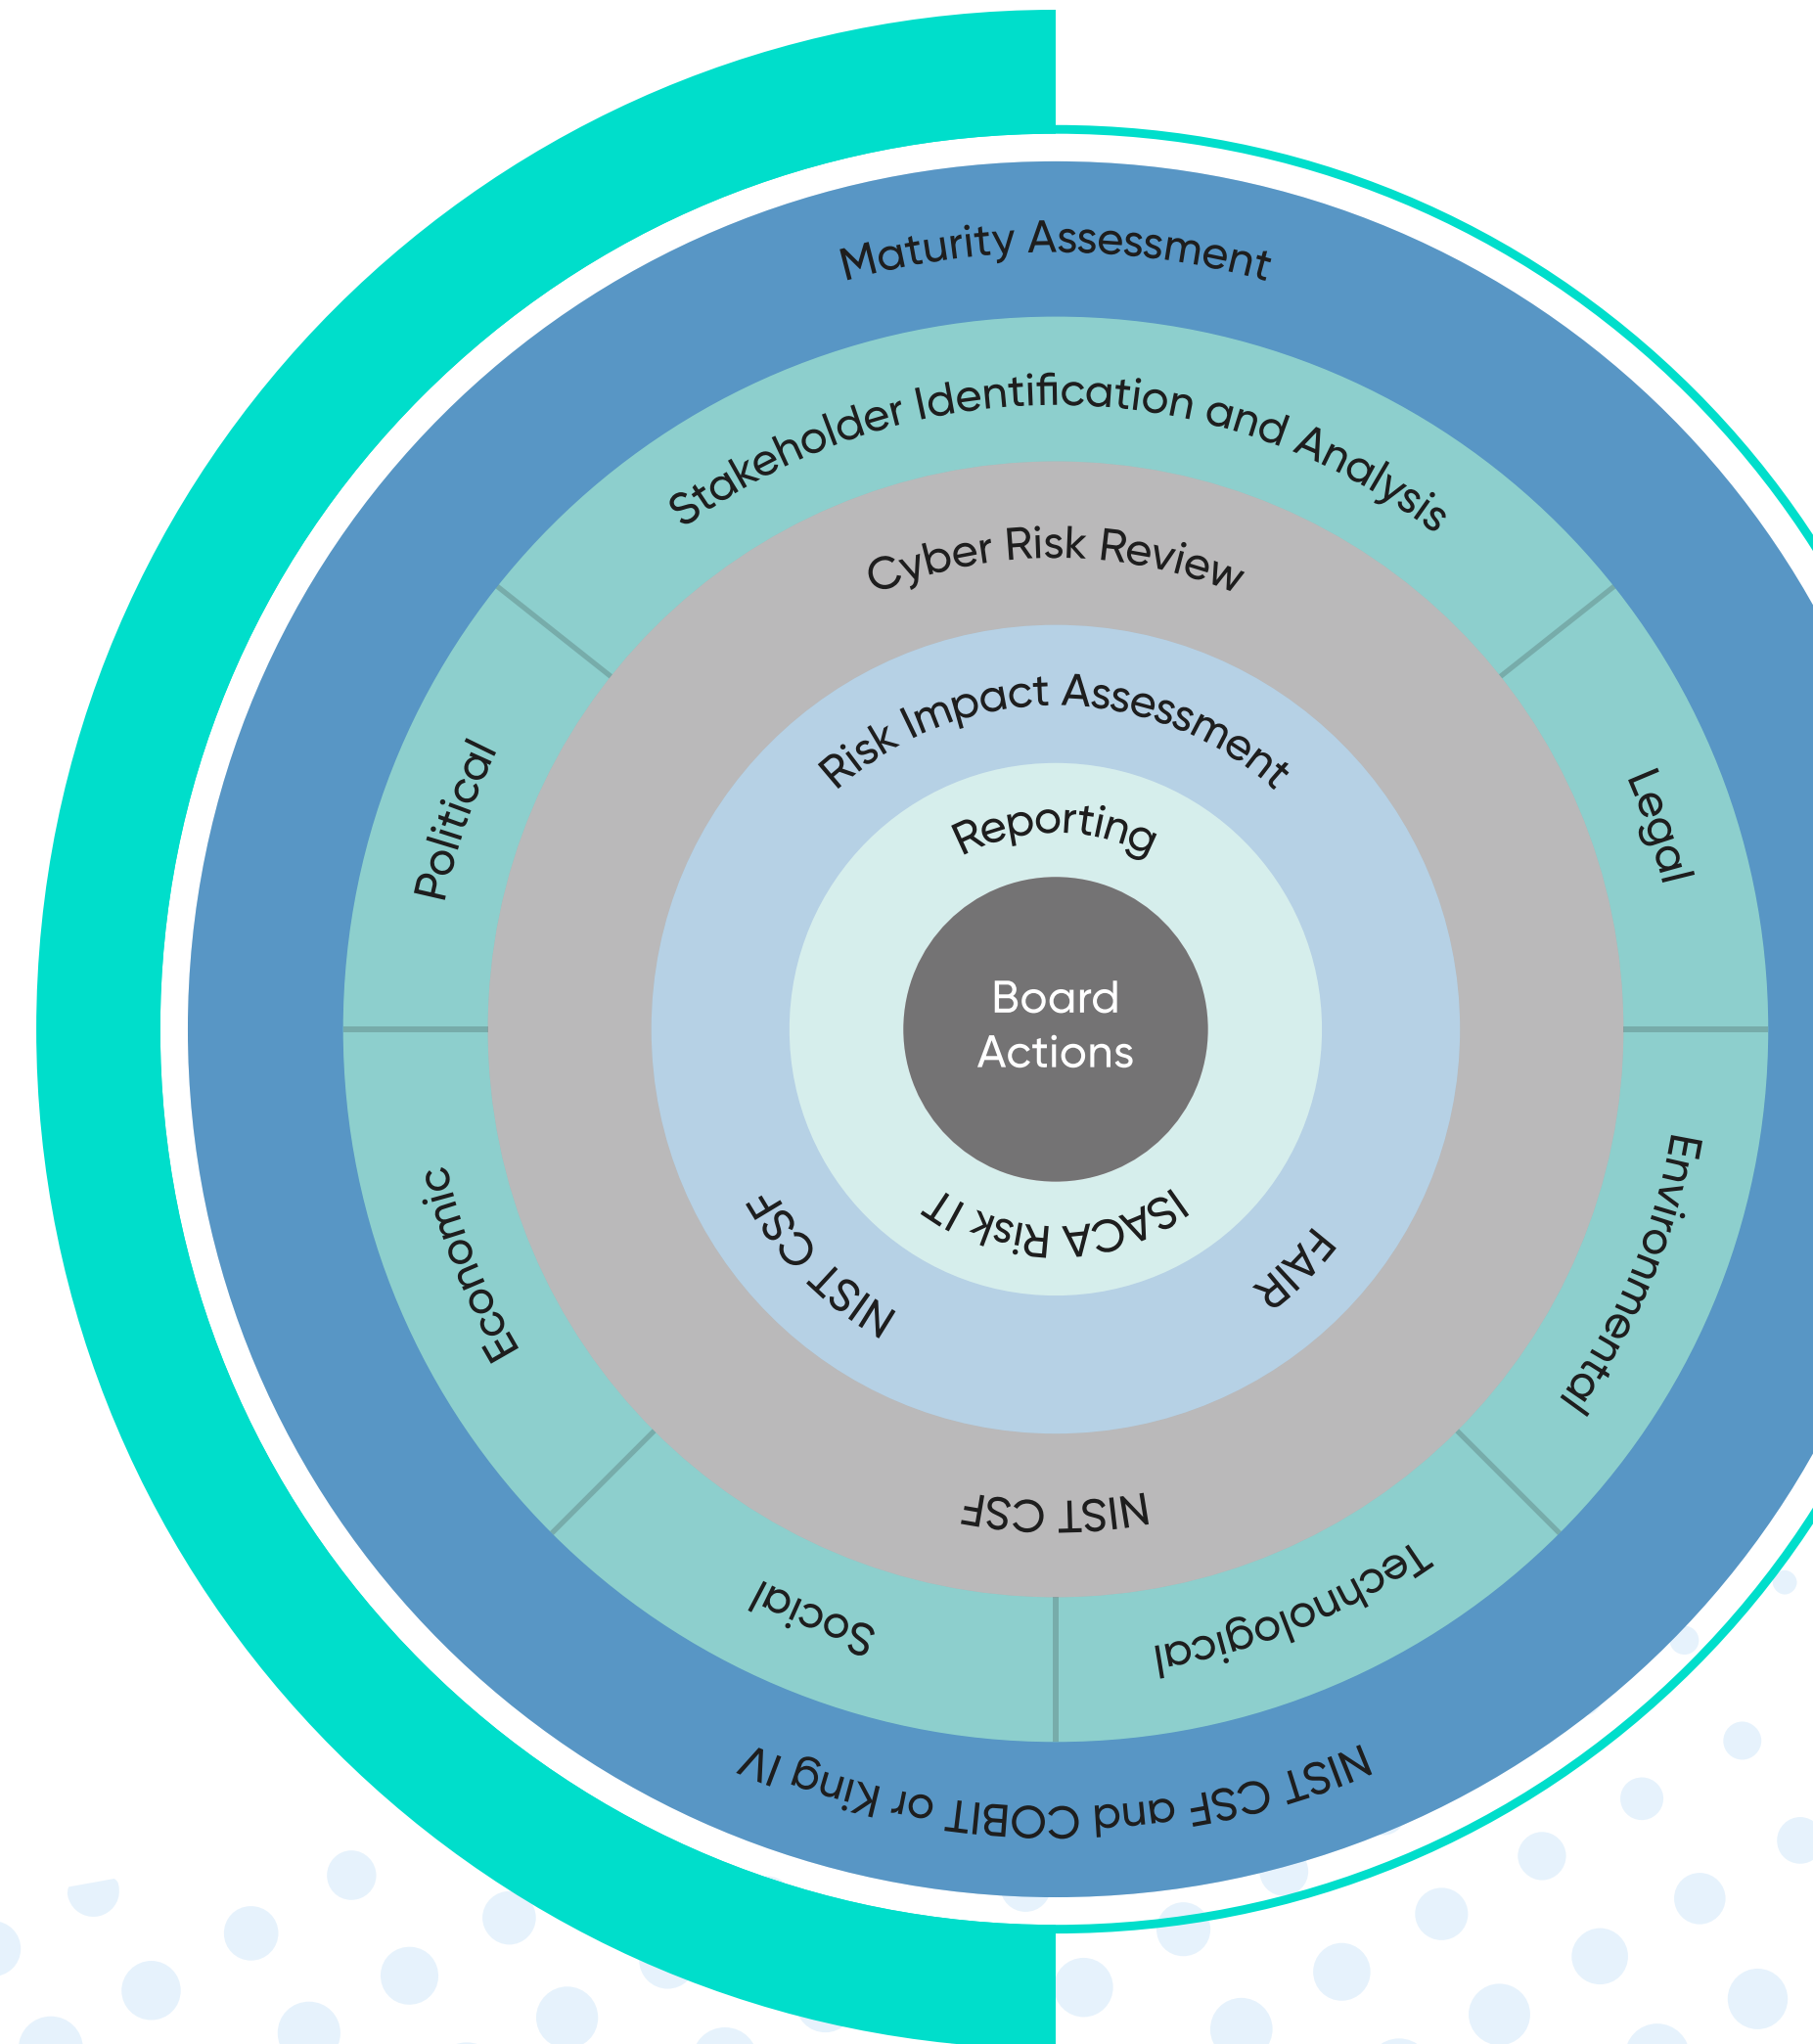

### Map the Ecosystem

Identify and assess third-party, supply-chain, and digital-footprint exposures across your stakeholder landscape.

### Report with Purpose

Deliver transparent, stakeholder-relevant reporting that strengthens trust and reputation over time.

## Tangible deliverables

- ✓ **Board-ready dashboard:** posture summary, third-party risk heatmap, supply-chain trend, stakeholder impact notes.
- ✓ **Stakeholder-aware report:** technical + business + societal impact sections, aligned to ESG narratives.
- ✓ **Playbooks:** proactive mitigation plans, comms templates for non-technical audiences, partner-engagement SOPs.
- ✓ **Cadence:** quarterly executive pack + monthly operational updates; ad-hoc briefings for regulatory or stakeholder events.

## Results you can expect

- ✓ **Better engagement** – clearer, more relevant conversations with non-technical stakeholders and the board.
- ✓ **Stronger trust** – transparent practices that enhance reputation and reinforce relationships.
- ✓ **Future-readiness** – reporting that adapts to tech change and evolving privacy/security regulations.
- ✓ **Resilience by design** – long-term objectives that improve posture and culture.

## Who it's for

- ✓ Boards and ExCo seeking ESG-aligned cyber oversight
- ✓ CISOs and Risk leaders needing stakeholder-aware reporting
- ✓ Procurement/Supply-Chain owners managing third-party risk
- ✓ Sustainability/ESG teams integrating cyber into broader disclosures

# About CyberAntix™

CyberAntix helps organisations bridge the cybersecurity reporting gap. Our unique G-RISE framework, built by practitioners for practitioners, delivers a practical, holistic approach that strengthens resilience, protects stakeholder relationships, and supports sustainable growth.

**Let's make your cyber reporting comprehensive, credible, and board-ready.**
